

VIXVOX Program is based on a strategy developed by Edoardo Ciravegna, Asset Manager with more than 25 years of experience in the financial markets. The program trades in CBOE VIX Futures and EUREX VSTOXX Futures, with a "carry" volatility strategy and/or exploiting strong directional movements. The following results are displayed with reference to the EUR traded Program.

Commentary

The month of April was characterized by a substantial lack of direction of the stock market, accompanied by an above average volatility. The closing level of the S&P in April was almost identical to that of March (+ 0.27%), but during the month almost half of the days showed variations of more than 1%, with several variations of around 2%. Faced with this situation, the VixVox Strategy continued to be very active on the Vix (only in 2 days there was a Flat signal), but the daily results were mostly moderate, continuously fluctuating, so that the final result was very close to zero. The Eurostoxx had a steadier behavior, so that the volatility measured by the VStoxx index fell to very low levels. Consequently the strategy remained inactive.

Time Aggregate Analysis (%)

	24 mo	12 mo	6 mo	3 mo	1 mo
Avg.	47.5	24.7	10.6	6.2	2.2
High	95.2	85.9	48.7	29.0	31.0
