

VIXVOX Program is based on a strategy developed by Edoardo Ciravegna, Asset Manager with more than 25 years of experience in the financial markets. The program trades in CBOE VIX Futures and EUREX VSTOXX Futures, with a "carry" volatility strategy and/or exploiting strong directional movements. The following results are displayed with reference to the EUR traded Program.

**VAMI**      **179.95**

### PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS

#### Commentary

The month of June saw a positive trend for the S&P in the first two weeks, counterbalanced by a decidedly negative trend in the following days. Finally in the last days of the month we witnessed a double swing, so that the closing level of the month was slightly higher than the opening one, but these oscillations made trading very difficult, especially on the VIX. In fact, while the activity on the VStoxx was concentrated in 2-3 episodes, closed with overall positive results, the VIX was very active also in this month, but the final phase saw remarkable losses. If it were not for risk diversification and moderation measures (trading on the VStoxx, the VIX hedging system, ..), this month would have been one of the most negative in the history of the strategy. The impression is that, as long as the American equity market is not entering a markedly bearish mood, the uncertainty and the consequent fluctuation of the prices will continue to characterize it, and the other stock markets as a consequence.

### Time Aggregate Analysis (%)

	24 mo	12 mo	6 mo	3 mo	1 mo
<b>Avg.</b>	47.7	24.0	11.2	5.6	2.0
