

VIXVOX Program is based on a strategy developed by Edoardo Ciravegna, Asset Manager with more than 25 years of experience in the financial markets. The program trades in CBOE VIX Futures and EUREX VSTOXX Futures, with a "carry" volatility strategy and/or exploiting strong directional movements. The following results are displayed with reference to the EUR traded Program.

VAMI	167,47	Feb 19 Return (%)	1,60
YTD (%)	5,16		

CTA Asset Under Management (Milion EUR)	0,901
Assets Under Management (Milion EUR)	9,228

PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS Commentary

Also in February the upward movement of the S&P Index continued, ending the month with a further 3% increase. As a consequence volatility lowered more than 10%, going below 15 for the first time since the beginning of October.

It should however be noted that, despite the lack of considerable fluctuations during the month, the trend of the VIX showed a certain nervousness, recording a spike of 15% on 7 February, and 2 more upward movements of 10%, originated by drops not particularly significant in the S&P index. The feeling is that the market wants to benefit from the more favorable prospects offered by the easing in the monetary policy by the FED, but that a certain basic nervousness remains, after the scare of December. In any case, the normalization perspective in the VIX level was partly achieved in February. The Vstox, after the turbulence phase that occurred on February 7th and in the following days, descended more markedly than the VIX, but like the VIX showing nervousness. In conclusion, the month ended with a fairly positive result, to which the Vstox did not contribute.

Time Aggregate Analysis (%)

	24 mo	12 mo	6 mo	3 mo	1 mo
