

VIXVOX Program is based on a strategy developed by Edoardo Ciravegna, Asset Manager with more than 25 years of experience in the financial markets. The program trades in CBOE VIX Futures and EUREX VSTOXX Futures, with a "carry" volatility strategy and/or exploiting strong directional movements. The following results are displayed with reference to the EUR traded Program.

VAMI	174.04	Mar 18 Return (%)	-3.41

PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS Commentary

In March, the S&P continued the recovery begun in the second half of February. This trend culminated at the end of the first decade, when it reached 2800. The VIX index, which had started the month at a level of 22, gradually settled until breaking the level of 15 on March 9th. From this moment on, however, the positive phase was exhausted, and the S&P returned to 2700 during the second decade. At this point, as a result of the nervousness generated by the statements of President Trump regarding tariffs and protectionism, the downward movement accelerated, as did the volatility of the market. After having reached a high point of 24.87 on March 23 (S&P at 2600), the VIX index settled steadily above 20. It should be noted that the VIX Futures remained almost constantly in Backwardation (at a discount to the level of the index). It should also be noted that the volatility of the Eurostoxx 50 remained consistently below that on the S&P, even the 2 indices had similar performances. In this market situation, the VixVox strategy has been very active, especially with the Vix models, with a predominantly bullish attitude. This activity resulted in contained losses in the first half of the month, and in a moderate recovery in the second half. The overall score for the month was a negative 2.8%

Time Aggregate Analysis (%)
