

VIXVOX Program is based on a strategy developed by Edoardo Ciravegna, Asset Manager with more than 25 years of experience in the financial markets. The program trades in CBOE VIX Futures and EUREX VSTOXX Futures, with a "carry" volatility strategy and/or exploiting strong directional movements. The following results are displayed with reference to the EUR traded Program.

VAMI	175.54	May 18 Return (%)	0.56

PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS Commentary

The month of May was positive for the American Equity indices (S&P +3%), flat for the Eurostoxx 50. In line with this trend, volatility went down during the month, despite two phases of tension, on May 3rd and 15th. Approaching month end, the uncertainties about Italian government landscape and the worries for the Euro arising from the possibility of a new Italian Minister of Economy hostile to the Single Currency, have produced a significant correction of European equity indices and, to a lesser extent of the American ones, but above all a spike in volatility indexes. (The VIX, which had closed on May 25th at 13.22, reached a maximum of 18.78 on the 29th).

With the solution of the crisis equities recovered and volatility dropped significantly, but the level of the VIX at the end of the month was just lower than the initial level.

The VIX trading systems have been very active all month, gradually producing a reasonable margin, which has been wiped out in the last week of the month. The VStoxx system, on the other hand, which became active only as tensions for the formation of the Italian government arose, achieved good gains in the phase of increased tension, and lost most of it in the subsequent phase, but maintained a small profit.

Time Aggregate Analysis (%)

	24 mo	12 mo	6 mo	3 mo	1 mo
Avg.	44.0	23.2	9.8	5.1	2.0
