

VIXVOX Program is based on a strategy developed by Edoardo Ciravegna, Asset Manager with more than 25 years of experience in the financial markets. The program trades in CBOE VIX Futures and EUREX VSTOXX Futures, with a "carry" volatility strategy and/or exploiting strong directional movements. The following results are displayed with reference to the EUR traded Program.

PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS Commentary

December was a nightmare for equities worldwide. The S&P index lost almost 10%. This could have been an excellent opportunity to make money for the VixVox strategy, but unfortunately this was not the case. As in previous months, the inversion of the trend that took place after a vigorous upward phase, occurred without warning and the first day of inversion was the one that showed the greatest amplitude. In fact, on December 4th, when the S&P had returned close to 2800, suddenly there was a decline of 3.2%. The VIX reaction was a contained 26%, but the daily loss of the fund was still 3%. Even the following days were not easy, because after a further two days of moderate decline, the market recovered slightly. The Vix, which on December 7th had closed above 23, on December 13th descended to 20.65. The NAV of December 14th, at 108.02, was the lowest in the last few months. After the 13th, the S&P started to go down again, this time in a stable and growing progression, reaching a minimum of 2342 on December 24th. In the following days there was a moderate recovery, which brought the S&P to close the year at 2505. The VIX touched a point of 36 on the 24th, to go down again to 25.42 at the close of December 31st. In the last two weeks of December trading positions on the VIX were very limited, given the high levels reached, but with positive results.

Time Aggregate Analysis (%)

	24 mo	12 mo	6 mo	3 mo	1 mo
Avg.	30.8	19.4	8.0	3.7	1.4
