

DH NIX Alpha Program is based upon a proprietary trading method of DeltaHedge and seeks to generate attractive absolute returns through investments in just one market: E-mini 5\$ Dow Jones Industrial Average Futures at CME. The founding idea of the Program is to decline the diversification concept in Automatic Trading Systems portfolios, trading only on a single Futures with a multi-strategy approach. Designed as institutional version of DH Nix Program, with a customized Money Management algorithm.

Commentary

April is generally a negative month for this program: in fact, the results are very similar to the April 2016 ones. In May, we are going to run the program with an improved model, which produces positive performances in periods with unstable volatility behaviour, benefitting from volatility breakouts. In addition, we are introducing a proactive slippage control mechanism.
